ECOSYSTEM OVERVIEW

KEY ATTRIBUTES OF THE STARTUP ECOSYSTEM

In 2020, Ukraine climbed up to 64th position out of 190 countries in the World Bank’s Ease of Doing Business ranking. Ukraine is also rated second in terms of speed and depth of business climate improvement. And these favorable conditions can also be observed in relation to the startup ecosystem. Ukraine is 34th among 100 countries in the Global Startup Ecosystem Index in 2021. With over 2,000 startups, the country has a fast-developing startup ecosystem. Kyiv – the largest IT hub in Ukraine – is home to over 1,000 successful startups and other innovative companies. Simultaneously Kharkiv, Odessa, Dnipro, Lviv, and Vinnytsia are also developing as major centres of IT activity and startup clusters, reducing such an unhealthy concentration like in Moscow-centric Russia. Ukraine’s startup ecosystem is in the take-off phase. Ukraine’s startup ecosystem is in the take-off phase, thanks to its talents, diverse innovation structure and the necessary players who contribute to the development processes. The next figure (Figure 1.) shows us the structural shape of the ecosystem.

**FIGURE 1.** The structure of the Ukrainian innovation ecosystem. 
However, the path of development is bordered by serious challenges.

- Ukrainian innovation system requires additional reform of universities and academies inherited from the Soviet economy,

- poor conditions for the researchers have caused significant brain-drain over the last 20 years,

- outdated equipments are relevant problem for the most Ukrainian R&D institutions,

- universities are not involved in R&D activities at a desired level,

- in the economy prevailed traditional sectors (agriculture, metals and heavy manufacturing), which generally have low demand for R&D,

- lack of motivation and ability of financial institutions to support R&D,

- lack of the dialog and cooperation between innovation ecosystem players,

- in spite of the large amount of innovation infrastructure organisations in Ukraine, there is still a deficiency in providing services for startups and innovation companies in general,

- Ukraine has an insufficient level of consulting services,

- despite its innovative technologies and a booming IT industry, Ukraine is not well-known as a technology startup hub,

- shortage on relevant information regarding financial and funding opportunities,

- weak protection of Intellectual property rights,

- there are no tax credits for R&D in Ukraine,

- public support on venture capital funds is weakly developed,

- international cooperation and international knowledge sharing should be improved,

- need to develop critical business skills: many Ukrainian startups pursue innovative ideas or work with world-class technologies, but lack a complete understanding of how to develop a globally-competitive business model,

- legislature concerning ICT (in particular PPP) is still incoherent in Ukraine, which generates disturbances for innovative companies.
Most of the governmental strategies focusing on digital transformation ended in 2020. (See for example: Strategy of innovation development of Ukraine for 2010–2020 in the context of globalisation challenges; Strategy for the development of the information society in Ukraine.) Reliable data on their successful implementation are not yet available. In fact, governmental support for the digital transformation has not stopped here and additional concepts are being developed or their implementations have already started. The following figure (Figure 2.) summarizes the key elements and their contents of the National Digital Agenda.

**Key Elements of the National Digital Agenda**

- Building on economic competitive advantages
- Digital development strategies must focus on the evidence-based selection of economic sectors or sub-sectors which are enabled by the digital innovations (including digital readiness assessment, mapping of key investment opportunities based on adopted principles, priorities, financial and social effect estimation)
- Coordination and integration of state and regional strategies with national innovation, competitiveness, and development plans

- Attracting long term Investments
- Incentives to promote clusters or value chain linkages in the local economy
- Efficient onboarding for inbound investments
- Scaling up investment promotion efforts
- Relationship management of key investors

- Reducing investment bottlenecks
- Streamlined, non-biased regulatory framework
- Consistent, efficient, and secured implementation of adopted regulation

- Addressing market failures and promoting inclusion
- Open and trustworthy communication with investors
- Small and medium business promotion
- Inclusion of women and disadvantaged demographics

There are various incubators and accelerators in Ukraine to help the benefits of the digital transformation and the development of startups.

**1991 Open Data Incubator** is Ukraine's first non-commercial incubator, that helps to transform tons of open data into startups that serve citizens, businesses and governmental institutions.

**Blue Lake Accelerator** is a UK based early-stage VC with a unique vision. The accelerator uncovers, invests and supports exceptional founders before they come on to the radar of the mainstream investor community. The focus is on B2B, SaaS Pre-Seed and Seed stage startups although we might be open to other opportunities.

<https://www.bluelakevc.com/>
INDAX production accelerator is a system platform for servicing and scaling small and medium-sized businesses in the industrial sector.

[https://indax.com.ua/]

IoT Hub Accelerator is an accelerator for IoT startups. IoT Hub community unites result-oriented people with laser focus and passion in one place and time to build tech organizations from idea to cash out.

[https://iothub.xyz/#about]

RadarTech is a technology cluster that unites industrial corporate startup accelerators.

[https://radartech.com.ua/#about]

Sector X is an innovative platform that combines acceleration and study programs for startups, corporate innovation programs for business, and services for venture investors. Sector X is a B2B/B2C startup accelerator for teams from Ukraine and Eastern Europe in the field of big data, VR/AR, IoT.

[http://sectorx.city/aboutus/eng]

Scythia Ventures Accelerator is a partnership between early stage venture fund Scythia Ventures and investment platform [startup.ua] that teamed up together to develop early stage ideas with angel and pre-seed investments of up to USD 100,000 in the ICT focused startups based in the CIS (ex-USSR) region.

**REMARKABLE STARTUPS:**

It is an interesting fact that many startups that are already known worldwide and all of us use their services all started their journey from Kyiv. A non-exhaustive list follows: Ajax Systems, Grammarly, MacPaw, Netpeak Software, People.ai, PetCube, Preply, Reface and Restream. Other remarkable startups are mentioned below:
Adtelligent Inc. The company is headquartered in New York City, NY, USA with offices in London, U.K, Odessa and Kyiv, Ukraine and expanding geographies around the World. Adtelligent produces all of its technology in-house and has been acknowledged as one of the fastest growing independent technology companies by Inc. 5000 in 2016 and 2017. Adtelligent is a sell side ad technology company providing fully-featured Ad Monetization Platform and Header Bidding Management solutions for publishers. By integrating ad serving for display and video, header bidding wrapper capabilities, and outstream functionality into one holistic stack, Adtelligent has established a new standard for selling inventory to programmatic buyers.
